 TIGERFLOW	PACKAGED PUMP SYSTEMS: NSF/ANSI 61 CERTIFIED FOR POTABLE DRINKING WATER IAMPO #: N-5169
	
 ENGINEERED	
 SYSTEMS TO	
 THE WORLD	

ANSI/NSF 61 certification is a requirement NOW in major US markets...

TIGERFLOW ES-3000 End Suction Domestic Water Booster Systems

TIGERFLOW VMS-4000 Vertical Multi-Stage Domestic Water Booster Systems

TIGERFLOW has officially received ANSI/NSF 61 AD1 Section 8 # N-5169 certification for the TIGERFLOW ES-3000 End Suction Booster Systems and VMS-4000 Vertical Multi-Stage Booster systems series by the International Association of Plumbing and Mechanical Officials (IAPMO). The company's production facilities were also certified.

The ANSI/NSF 61 (aka Standard 61 or NSF 61) standard covers all products in contact with potable water, and encompasses potential extractants whether organic or metal, to ensure clear drinking water distribution from source to tap in the US and Canada. The certification requires all points-of-contact within a potable water delivery system meet Uniform Plumbing Code™ standards including pipes, pumps, hoses, fittings, cements, coatings, gaskets, adhesives, lubricants, carbon, sand, zeolite, ion exchange media, water meters, in-line valves, filters, process equipment, mechanical plumbing devices, and endpoint devices like faucets and drinking fountains.

For example, the clear drinking water standard has become mandatory for all products used to supply drinking water in all new buildings in Los Angeles, California. In August 2006

IAPMO is an independent, nationally recognized ANSI-certified third party testing organization.

the city of Los Angeles sent letters to all their listed booster system suppliers requiring them to provide a "Toxicity report from a city approved 3rd party testing agency which verifies that the pump discharge water is non-harmful for human usage and consumption. The test standard shall be National Sanitary Foundation Standard Number 61 (NSF-61 - Drinking Water System Components-Health effects);" i.e. ANSI/NSF-61 certified pumping system.
